**In the era of Generative AI,
the paradigm of enterprise document & file management is changing.**

Key features

Connecting corporate intellectual assets with AI to discover new possibilities.

Document Management Systems (DMS) have continuously evolved alongside the IT environment.

Recently, the IT ecosystem has been undergoing a rapid paradigm shift centered on AI and Cloud technologies.

JenDrive is engineered right on top of this wave of transformation.

It supports on-premise deployment of Open AI (LLM) models—such as Nemotron, Muse Glimmer, Gemma, and Qwen—for direct internal use, while seamlessly integrating with proprietary AI services (OpenAI, Claude, Gemini) via API and MCP protocols.

● On-premise Environment

High Security & Control

Delivers top-tier security and operational productivity simultaneously by deploying On-premise AI & Storage directly within the corporate intranet.

● JenAI Engine

Smart File Management

Utilizes on-premise LLMs to enable worry-free AI usage without data leakage risks.
Directly deploys the latest Open AI models (Nemotron, Muse Glimmer, Gemma, Qwen) on internal infrastructure.

● Document Centralization

Collaboration Hub

Consolidates scattered enterprise assets from personal PCs and emails into a unified workspace for organized sharing and collaboration.

● AI Smart Search

Intelligent Discovery

Centralizes internal files and supports AI-powered intelligent search navigation.
Automatically classifies and organizes uploaded documents by topic using VectorDB integration.

Differentiators

Keep original documents safely stored within your internal corporate network.

Protect your valuable assets by deploying Storage and AI servers directly inside your corporate network.
Fundamentally prevent data leakage of confidential documents and R&D intellectual property.

● File Storage

Customer Internal Network Storage

Original documents are securely stored inside your intranet, fundamentally blocking file leak risks.

● AI Server

Search, Summarization, & Recommendation Engine

Deploy dedicated JenAI Cloud servers on-premise to perform AI summaries and recommendations safely.

● JenDesktop

Windows Explorer Integration

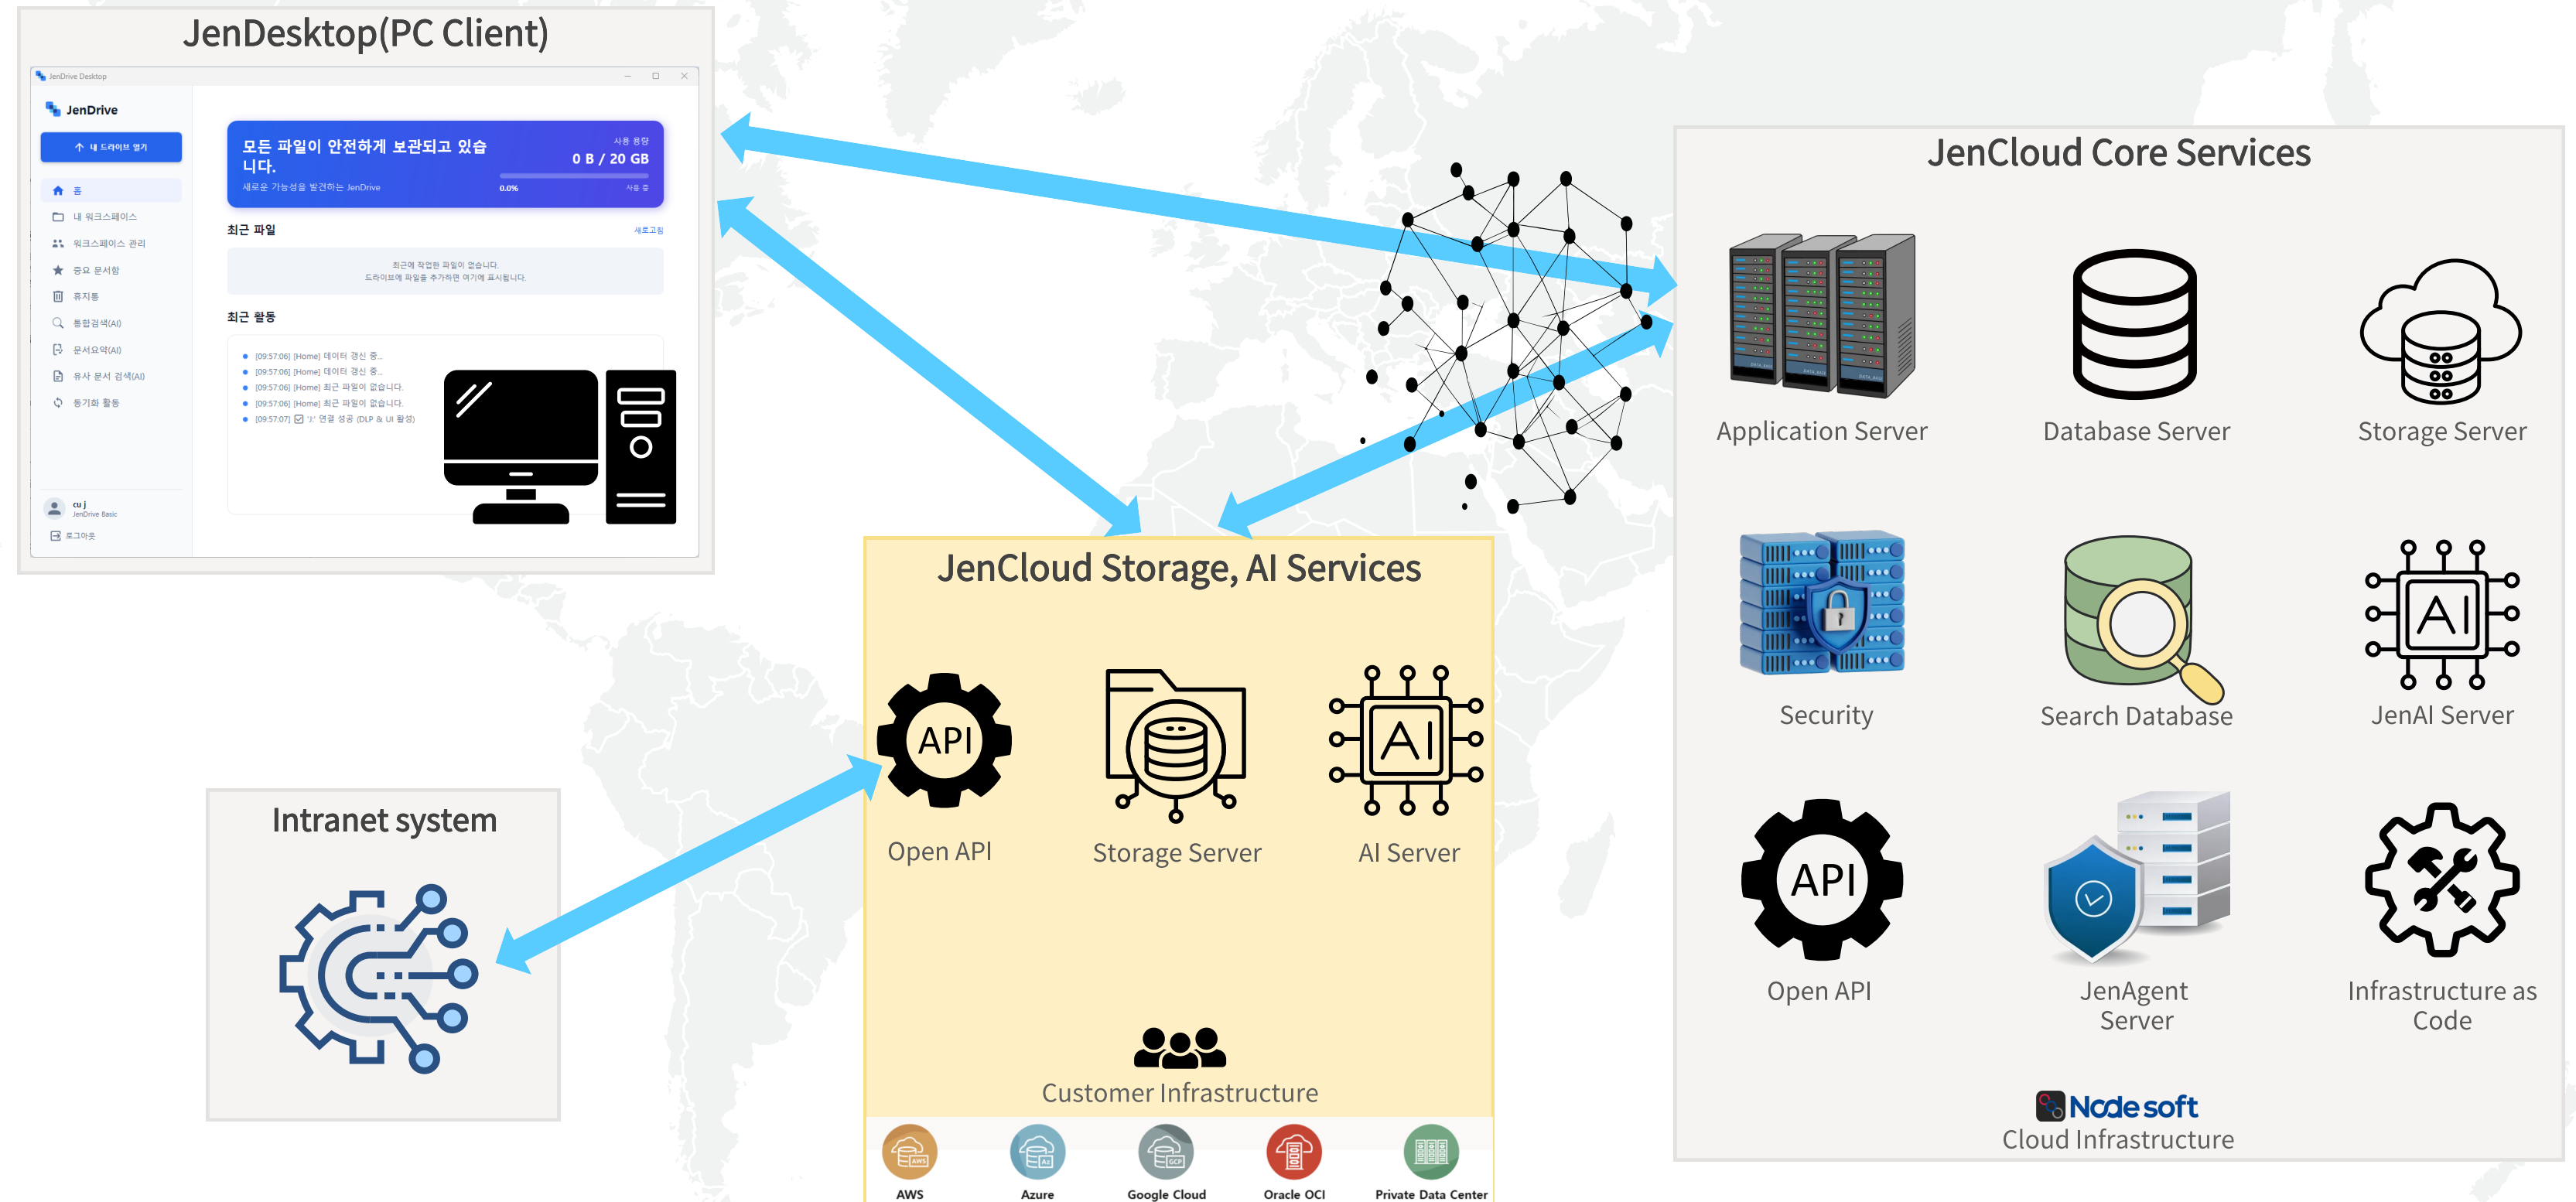

Provided as a native "Drive" interface. Controls file exfiltration (attachment/transfer) and tracks complete action logs.

● Open API

Seamless Business Expansion

Supports flexible Open API integration with legacy internal systems and external services.

Architecture highlights

Why? JenDrive?

01

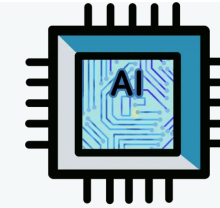

ORIGINAL

Data Protection

- Safe Internal Storage: Original files are securely stored on internal network servers.
- Dedicated Performance: Dedicated JenDrive Storage servers with high-speed upload/download and storage server redundancy.

02

AI

Intelligent Workspace

- In-House AI Engine: Powered by dedicated on-premise JenAI (LLM).
- VectorDB Integration: Delivers automatic summarization, integrated search engines, semantic search, and context-aware related document recommendations.

03

SECURITY

Compliance & Governance

- Exfiltration Control: Blocks unauthorized file transfers and actively monitors leak attempts.
- Compliance Ready: Tracks full event histories to support enterprise auditing and compliance tasks.

Case studies

Global Electronics Enterprise

Background

Rapid workforce expansion required a centralized document tool to manage files scattered across personal PCs, messaging apps, and emails. Needed to improve operational efficiency while preventing data leaks.

Implementation

Consolidated over 1,000,000+ scattered files into JenDrive, establishing an AI-powered central document environment.

Results

Boosted employee productivity and team collaboration, established a strong culture of document asset management, and enabled proactive leak prevention through regular audits.

Specialized Tax & Accounting Firm

Background

Needed a document platform with strict security standards to manage highly sensitive client tax records and build trust.

Implementation

Implemented JenDrive for tax filing document transfers across 100+ corporate clients, utilizing granular folder permissions and strict file exfiltration policies.

Results

Solidified brand image as a highly secure tax firm, boosted client trust, prevented client churn, and expanded new client acquisition.
